

Publication of results of the environmental inspection of technical plants

Environmental authorities (district councils, administrative districts, urban communes) carry out regular cross-media environmental inspections at companies that could impair the environment.

Within the framework of the environmental inspection, compliance with the relevant environmental requirements stipulated in the legal provisions and approvals is specifically investigated.

The considerable results of inspections are summarized in environmental inspection reports and made available to the public.

Operator:

Company DELCOTEX Delius Techtex GmbH & Co.KG

Location:

Vilsendorfer Straße 50, 33739 Bielefeld

Designation of plant:

Coating plants for textile finishing (sliding fixing)

Date of inspection:

31 July 2014

Duration of surveillance:

4.5 hours

Registered or unregistered surveillance:

Registered

Responsible surveillance authority:

Bezirksregierung Detmold (Detmold District Council)

Scope of surveillance:

Cross-media surveillance by investigation and inspection with regard to the company organisation, emission control (exhaust duct; emission measurements), dealing with water endangering substances (plants subject to the ordinance installations handling materials hazardous to water) and operational waste management.

Basis of surveillance:

Licensing notice of 8 July 1993, file reference: 51.095.00/92/1023.2 and refurbishing in line with article 17 paragraph 1 BImSchG (Federal Emission Control Act) of 1 April 2005 as well as further provisions and administrative instructions.

Result of surveillance:

No deficiencies have been found.

Minor deficiencies:

(Minor deficiencies are deficiencies detected against material or formal requirements that evidently cannot involve any environmental impacts. A remark or letter of revision is sufficient. The operator confirms removal of the deficiencies within an appropriate period of time agreed upon.)

Substantial deficiencies:

(Substantial deficiencies are deficiencies detected against material or formal requirements that can involve environmental impacts. Removal of these deficiencies shall be demanded within a determined period of time with subsequent confirmation of execution. Removal of deficiencies shall be promptly investigated on the spot and documented.)

Serious deficiencies:

(Serious deficiencies are deficiencies detected against material or formal requirements that may involve acute, substantial environmental impacts. Removal of these deficiencies by the operator shall be immediately demanded. If necessary, a shutdown / partial shutdown of the plant shall be investigated. Removal of deficiencies shall be promptly investigated and documented.)

Measures initiated:

None
